## **Features**

- High Performance, Low Power AVR® 8-Bit Microcontroller
- Advanced RISC Architecture
  - 120 Powerful Instructions Most Single Clock Cycle Execution
  - 32 x 8 General Purpose Working Registers
  - Fully Static Operation
  - Up to 20 MIPS Througput at 20 MHz
- High Endurance Non-volatile Memory segments
  - 1K Bytes of In-System Self-programmable Flash program memory
  - 64 Bytes EEPROM
  - 64 Bytes Internal SRAM
  - Write/Erase Cycles: 10,000 Flash/100,000 EEPROM
  - Data retention: 20 Years at 85°C/100 Years at 25°C (see page 6)
  - Programming Lock for Self-Programming Flash & EEPROM Data Security
- · Peripheral Features
  - One 8-bit Timer/Counter with Prescaler and Two PWM Channels
  - 4-channel, 10-bit ADC with Internal Voltage Reference
  - Programmable Watchdog Timer with Separate On-chip Oscillator
  - On-chip Analog Comparator
- · Special Microcontroller Features
  - debugWIRE On-chip Debug System
  - In-System Programmable via SPI Port
  - External and Internal Interrupt Sources
  - Low Power Idle, ADC Noise Reduction, and Power-down Modes
  - Enhanced Power-on Reset Circuit
  - Programmable Brown-out Detection Circuit with Software Disable Function
  - Internal Calibrated Oscillator
- I/O and Packages
  - 8-pin PDIP/SOIC: Six Programmable I/O Lines
  - 10-pad MLF: Six Programmable I/O Lines
  - 20-pad MLF: Six Programmable I/O Lines
- Operating Voltage:
  - 1.8 5.5V
- · Speed Grade:
  - 0 4 MHz @ 1.8 5.5V
  - 0 10 MHz @ 2.7 5.5V
  - 0 20 MHz @ 4.5 5.5V
- · Industrial Temperature Range
- Low Power Consumption
  - Active Mode:
    - 190 μA at 1.8 V and 1 MHz
  - Idle Mode:
    - 24 µA at 1.8 V and 1 MHz

ATtiny13A

Summary

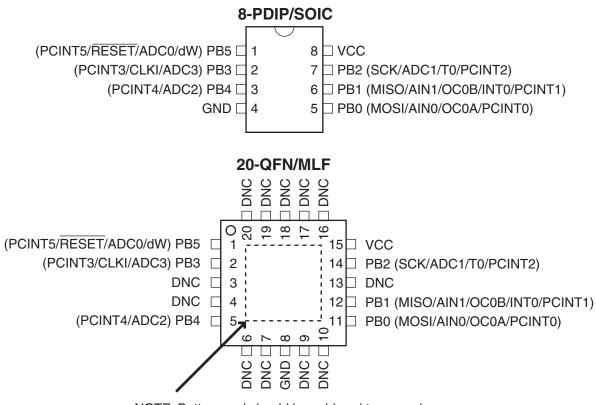

Rev. 8126DS-AVR-11/09

## 1. Pin Configurations

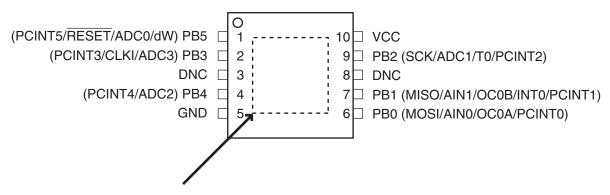

Figure 1-1. Pinout of ATtiny13A

NOTE: Bottom pad should be soldered to ground.

**DNC: Do Not Connect** 

## 10-QFN/MLF

NOTE: Bottom pad should be soldered to ground.

**DNC: Do Not Connect** 

## 1.1 Pin Description

### 1.1.1 VCC

Supply voltage.

### 1.1.2 GND

Ground.

### 1.1.3 Port B (PB5:PB0)

Port B is a 6-bit bi-directional I/O port with internal pull-up resistors (selected for each bit). The Port B output buffers have symmetrical drive characteristics with both high sink and source capability. As inputs, Port B pins that are externally pulled low will source current if the pull-up resistors are activated. The Port B pins are tri-stated when a reset condition becomes active, even if the clock is not running.

Port B also serves the functions of various special features of the ATtiny13A as listed on page 55.

## 1.1.4 **RESET**

Reset input. A low level on this pin for longer than the minimum pulse length will generate a reset, even if the clock is not running and provided the reset pin has not been disabled. The minimum pulse length is given in Table 18-4 on page 120. Shorter pulses are not guaranteed to generate a reset.

The reset pin can also be used as a (weak) I/O pin.

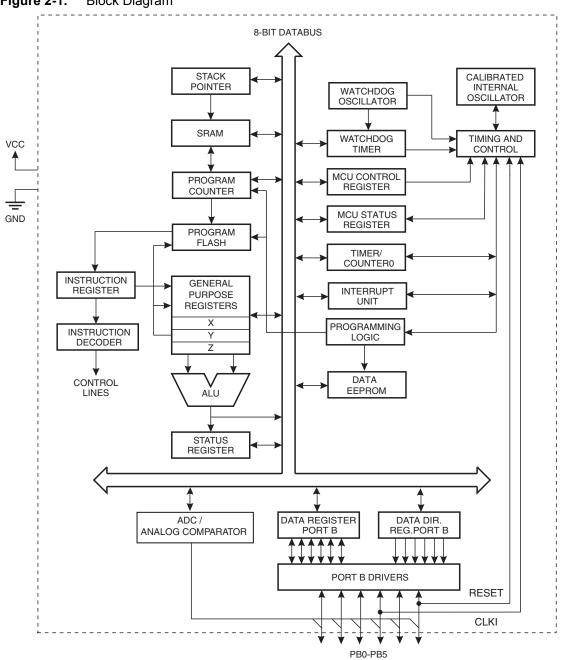

#### **Overview** 2.

The ATtiny13A is a low-power CMOS 8-bit microcontroller based on the AVR enhanced RISC architecture. By executing powerful instructions in a single clock cycle, the ATtiny13A achieves throughputs approaching 1 MIPS per MHz allowing the system designer to optimize power consumption versus processing speed.

#### 2.1 **Block Diagram**

Figure 2-1. **Block Diagram** 

The AVR core combines a rich instruction set with 32 general purpose working registers. All 32 registers are directly connected to the Arithmetic Logic Unit (ALU), allowing two independent registers to be accessed in one single instruction executed in one clock cycle. The resulting architecture is more code efficient while achieving throughputs up to ten times faster than conventional CISC microcontrollers.

The ATtiny13A provides the following features: 1K byte of In-System Programmable Flash, 64 bytes EEPROM, 64 bytes SRAM, 6 general purpose I/O lines, 32 general purpose working registers, one 8-bit Timer/Counter with compare modes, Internal and External Interrupts, a 4-channel, 10-bit ADC, a programmable Watchdog Timer with internal Oscillator, and three software selectable power saving modes. The Idle mode stops the CPU while allowing the SRAM, Timer/Counter, ADC, Analog Comparator, and Interrupt system to continue functioning. The Power-down mode saves the register contents, disabling all chip functions until the next Interrupt or Hardware Reset. The ADC Noise Reduction mode stops the CPU and all I/O modules except ADC, to minimize switching noise during ADC conversions.

The device is manufactured using Atmel's high density non-volatile memory technology. The On-chip ISP Flash allows the Program memory to be re-programmed In-System through an SPI serial interface, by a conventional non-volatile memory programmer or by an On-chip boot code running on the AVR core.

The ATtiny13A AVR is supported with a full suite of program and system development tools including: C Compilers, Macro Assemblers, Program Debugger/Simulators, and Evaluation kits.

## 3. About

## 3.1 Resources

A comprehensive set of drivers, application notes, data sheets and descriptions on development tools are available for download at http://www.atmel.com/avr.

## 3.2 Code Examples

This documentation contains simple code examples that briefly show how to use various parts of the device. These code examples assume that the part specific header file is included before compilation. Be aware that not all C compiler vendors include bit definitions in the header files and interrupt handling in C is compiler dependent. Please confirm with the C compiler documentation for more details.

## 3.3 Data Retention

Reliability Qualification results show that the projected data retention failure rate is much less than 1 PPM over 20 years at 85°C or 100 years at 25·C.

Notes: 1. For compatibility with future devices, reserved bits should be written to zero if accessed. Reserved I/O memory addresses should never be written.

2. I/O Registers within the address range 0x00 - 0x1F are directly bit-accessible using the SBI and CBI instructions. In these registers, the value of single bits can be checked by using the SBIS and SBIC instructions.ome of the Status Flags are cleared by writing a logical one to them. Note that, unlike most other AVRs, the CBI and SBI instructions will only operation the specified bit, and can therefore be used on registers containing such Status Flags. The CBI and SBI instructions work with registers 0x00 to 0x1F only.

## **Ordering Information**

Speed (MHz) <sup>(1)</sup>	Power Supply (V) <sup>(1)</sup>	Ordering Code	Package <sup>(2)(3)</sup>	Operation Range
20	1.8 - 5.5	ATtiny13A-PU ATtiny13A-SU ATtiny13A-SH <sup>(4)</sup> ATtiny13A-SSU ATtiny13A-SSH <sup>(4)</sup> ATtiny13A-MU ATtiny13A-MMU <sup>(5)</sup>	8P3 8S2 8S2 8S1 8S1 20M1 10M1 <sup>(5)</sup>	Industrial (-40⋅C to 85⋅C)

- Notes: 1. For device speed vs.  $V_{CC}$ , see "Speed Grades" on page 118.
  - 2. This device can also be supplied in wafer form. Please contact your local Atmel sales office for detailed ordering information and minimum quantities.
  - 3. All packages are Pb-free, Halide-free, fully green and they comply with the European directive for Restriction of Hazardous Substances (RoHS).
  - 4. NiPdAu finish.
  - 5. Topside marking for ATtiny13A:

- 1st Line: T13 - 2nd Line: Axx - 3rd Line: xxx

	Package Type					
8P3	8-lead, 0.300" Wide, Plastic Dual Inline Package (PDIP)					
8S2 8-lead, 0.209" Wide, Plastic Small Outline Package (EIAJ SOIC)						
8S1 8-lead, 0.150" Wide, Plastic Gull-Wing Small Outline (JEDEC SOIC)						
20M1	20-pad, 4 x 4 x 0.8 mm Body, Lead Pitch 0.50 mm, Micro Lead Frame Package (MLF)					
10M1	10-pad, 3 x 3 x 1 mm Body, Lead Pitch 0.50 mm, Micro Lead Frame Package (MLF)

eA	0.300 BSC			4
L	0.115	0.130	0.150	2

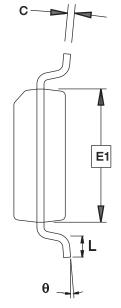

- This drawing is for general information only; refer to JEDEC Drawing MS-001, Variation BA for additional information.
   Dimensions A and L are measured with the package seated in JEDEC seating plane Gauge GS-3.
- 3. D, D1 and E1 dimensions do not include mold Flash or protrusions. Mold Flash or protrusions shall not exceed 0.010 inch.
- 4. E and eA measured with the leads constrained to be perpendicular to datum.
- 5. Pointed or rounded lead tips are preferred to ease insertion.
- 6. b2 and b3 maximum dimensions do not include Dambar protrusions. Dambar protrusions shall not exceed 0.010 (0.25 mm).

## 8. Errata

The revision letters in this section refer to the revision of the ATtiny13A device.

## 8.1 ATtiny13A Rev. G - H

• EEPROM can not be written below 1.9 Volt

## 1. EEPROM can not be written below 1.9 Volt

Writing the EEPROM at  $V_{\text{CC}}$  below 1.9 volts might fail.

## Problem Fix/Workaround

Do not write the EEPROM when  $V_{\text{CC}}$  is below 1.9 volts.

## 8.2 ATtiny13A Rev. E – F

These device revisions were not sampled.

## 8.3 ATtiny13A Rev. A – D

These device revisions were referred to as ATtiny13/ATtiny13V.

## 9. Datasheet Revision History

Please note that page numbers in this section refer to the current version of this document and may not apply to previous versions.

### 9.1 Rev. 8126D - 11/09

- 1. Added note "If the RSTDISPL fuse is programmed.." in Startup-up Times Table 6-5 and Table 6-6 on page 26.
- 2. Added addresses in all Register Description tables and cross-references to Register Summary.
- 3. Updated naming convention for -COM bits in tables from Table 11-2 on page 70 to Table 11-7 on page 72.
- 4. Updated value for t<sub>WD\_ERASE</sub> in Table 17-8, "Minimum Wait Delay Before Writing the Next Flash or EEPROM Location," on page 108.
- 5. Added NiPdAU note for -SH and -SSH in Section 6. "Ordering Information" on page 11.

## 9.2 Rev. 8126C - 09/09

- 1. Added EEPROM errata for rev. G H on page 17.
- 2. Added a note about topside marking in Section 6. "Ordering Information" on page 11.

## 9.3 Rev. 8126B - 11/08

- 1. Updated order codes on page 11 to reflect changes in material composition.
- 2. Updated sections:
  - "DIDR0 Digital Input Disable Register 0" on page 81
  - "DIDR0 Digital Input Disable Register 0" on page 95
- 3. Updated "Register Summary" on page 7.

### 9.4 Rev. 8126A - 05/08

- 1. Initial revision, created from document 2535I 04/08.
- 2. Updated characteristic plots of section "Typical Characteristics", starting on page 124.
- 3. Updated "Ordering Information" on page 11.
- 4. Updated section:
  - "Speed Grades" on page 118
- 5. Update tables:
  - "DC Characteristics,  $T_A$  = -40·C to 85·C" on page 117
  - "Calibration Accuracy of Internal RC Oscillator" on page 119
  - "Reset, Brown-out, and Internal Voltage Characteristics" on page 120
  - "ADC Characteristics, Single Ended Channels. TA = -40⋅C 85⋅C" on page 121
  - "Serial Programming Characteristics, T<sub>A</sub> = -40·C to 85·C" on page 122
- 6. Added description of new function, "Power Reduction Register":
  - Added functional description on page 31
  - Added bit description on page 34
  - Added section "Supply Current of I/O Modules" on page 124
  - Updated Register Summary on page 7

- 7. Added description of new function, "Software BOD Disable":
  - Added functional description on page 31
  - Updated section on page 32
  - Added register description on page 33
  - Updated Register Summary on page 7
- 8. Added description of enhanced function, "Enhanced Power-On Reset":
  - Updated Table 18-4 on page 120, and Table 18-5 on page 120
